FORWARD OVERHEAD PANEL

NG

Pneumatics System Notes

- 1 sources of pneumatic power are
 - engines 1 & 2 bleed air system (5th and 9th stages of the high pressure compressor)
 - APU bleed air system
 - pneumatic ground air connection
- 2 supplies pressurized air to the following systems and components:
 - head pressure for hydraulic reservoirs and potable water
 - air conditioning and pressurization
 - engine cowl and wing anti-ice
 - engine starters
- 3 bleed air source
 - is 5th stage engine bleed (lower pressure) when power is high and 9th stage engine bleed (higher pressure) when the power is at reduced level
 - 5th stage air is not sufficient for pneumatic system demand at low engine speeds so 9th stage assists, such as idle, or for high demand such as crossbleed start
 - the 5th stage check valve prevents 9th stage air flow into the 5th stage bleed port
 - when retarding the throttle, the engine bleed air system goes from 5th to 9th stage bleed
 - the duct pressure may decrease to approximately 20 psi based on how quickly the high stage valve opens and regulates the bleed air
 - 9th stage high pressure valve is spring loaded closed
 - regulates to 32 psi
 - closes if downstream pressure is > 9th stage press. or the 9th stage pressure > 110 psi
 - 9th stage is much hotter than 5th stage and therefore, requires more cooling
 - while the bleed system precooler will cool the air adequately at all altitudes when operating on 5th stage air, its capability is reduced when operating with 9th stage air
- 4 pneumatic manifold
 - gets high pressure air from one of the 4 sources and supplies it to the user systems
 - the pneumatic manifold has:
 - an isolation valve that separates the manifold into left and right sides
 - a ground pneumatic connector for an external source of pneumatic power
- 5 ground pneumatics
 - connects into right duct
 - do not supply more than 60 psi of pressure to the pneumatic system
- 6 isolation valve
 - AC operated and stays where it is with power failure
 - has a manual override lever for power-off operation
