An interview with me is now on NeoCrisis! : I have given an interview on a website called NeoCrisis.. The alpha early access is planned to be released in two weeks! : Hello my fellow followers! The alpha is almost done, and if everything proceeds as planned, I hope to release it within two weeks! I want to remind you, to avoid possible accusations in the future, that this is still

an alpha, and while it does have more content then a demo, it is still only a small part of the full game. In comparison to an alpha, the next version will have one more story arc, once again not connected to two story arcs from the demo. It will cover five brand new game rooms, located on the still unexplored part of the ship.. Reality Incognita Beta is at final testing stage : News about Reality incognita! Hello all those who follow me, who played Alpha, and who wishlisted my game! I finally transfered all the content and the engine to Unity. A professional beta tester is now checking Beta build for possible bugs. And my artist is now making last remaining cutscenes. So, I will dare to say, that the Beta is almost ready! It will still not have all game content, but it has way much more then Alpha, about a half of a full game. It is no longer divided to non-connected chapters, but plays as an adventure game should play, from the beginning to it's end.. Some update information : Everything is going smooth with the development of the final version. I am writing the code, and other members of the team make visual assets. I have some good news: in the end, I will make last chapter have TWO possible storylines, so you'll have to play it twice, to see the whole content. As it's a tradition in similar cases, one ending will be shorter and less satisfying, while another will be much more interesting.. Reality Incognita will be converted to Unity : Hello to all my followers, For a specific reason, I have no choice, but to fully convert to Unity. Even now, I and my freelancers are transferring all materials to new engine. The bad side of this, that the beta, and final version will be released later than I would expect. The good side - unlike generic Visual Studio, Unity allows to run games on all systems, not only Windows, including Mac, Linux and even Android. Again, full conversion will take some time, hopefully not very long. I apologize for that, and will do my best to do everything as fast as I can.. Early Access: Reality Incognita Alpha is released! : The time has come, Reality Incognita Early Access is finally here!. Patch 0.9.1.6 is bringing you Russian voiceovers at last! : Hello to all our fellow followers and customers! We are happy to say, that we finally deployed a large patch, with Russian voiceovers. We also now added achievements, both returned old ones, and added new. And even fixed a few bugs we missed earlier: 1) In the very beginning: two hibernation pods that started closed, now start open. 2) In the very end, final videos couldn't be skipped, now they can. 3) Ending scene was earlier getting stuck, now a proper Beta ending window appears. 4) Many errors in Russian translation also were fixed. Yes, there might be more bugs or text errors, so please notify us if you have something wrong. But the most important part - creating Russian voiceovers is now done, and we will now concentrate of final version with full content starting from tomorrow.
